- Protocols, guidelines, and other support information to help your facility improve care in weight loss,

Antipsychotic Initiatives

CMS is reviewing publicly reported measures on nursing home residents who are receiving an antipsychotic medication. The official measure is the percent of long-stay nursing home residents who are receiving an antipsychotic medication, excluding those residents diagnosed with schizophrenia, Huntington's Disease or Tourette's Syndrome. In 2011Q4, 23.9% of long-stay nursing home residents were receiving an antipsychotic medication; since then there has been a decrease of 9.0% to 21.7% in 2013Q1. Success has varied by state and CMS region, with some states and regions having seen a reduction of greater than 10%.

The long-stay measure on Nursing Home Compare, is the facility's score averaged over the last three quarters in order to give consumers information on the past history of each facility.
