Alzheimer's / Dementia Program

A full complement of dedicated medical staff and clinical providers are assigned to our Reflections Unit. The staff is comprised of specially trained and certified Dementia Practitioners through the National Council of Certified Dementia Practitioners and includes RNs, LPNs, CNAs, Geriatricians, Physician Assistants and therapeutic recreation staff.

Our Reflections program houses a locked 55 bed male specialty unit caring from those suffering from Alzheimer's disease and dementia-related disorders.

We understand the lack of sleep and struggle home caregivers go through prior to placing a loved one with Alzheimer's or Dementia. We strive to provide a program that delivers peace of mind to the families of our residents in this special population. All staff assigned to the Reflections unit are specially trained practitioners certified through the National Council of Certified Dementia Practitioners (NCCDP).

A full compliment of medical and clinical staff including physicians who are double board certified in internal medicine and geriatrics, RNs, LPNs, CNAs, nutritionists, psychiatrists, psychologists, physician assistants and therapeutic recreation staff provide a safe, secure environment for the residents on our Reflections unit.

A comprehensive therapeutic recreation program on the Reflections unit is offered to meet the functional levels of our residents to keep them engaged and active. Our residents can also participate in supervised trips and activities off the unit and outside of the facility.
